- Programming Skills: Java, C++, C#, Python, CSS, HTML, MySQL
- Front-End Frameworks: Angular
- Backend Developer: Node.js , React
- Environment: Visual Studio, Notepad++, Bluej, Eclipse
- Cloud-Based Development Environments: Github Code space
- Hard Skills: Algorithms, Data Structures, Database, Computer Networks, etc

Projects

- **Web Developer**
  Guided teams in the development of Caffex Coffee Shop website

  We developed a Website for a coffee shop where by customers can order drinks online and get discount online without going into the coffee shop. Also the stuff members can log in to the app to interact with customers.
- **Packet Tracer Project**
  Worked with group members, we were tasked to work on a company project. The company wanted to expand their business.After careful consideration of the factors, and after consulting with potential clients, the company has decided to move to a newly built office building. The new office does not have any suitable network infrastructure apart from a business ISP fibre connection and ONT, and the company has given you the task of setting up the new office network in the new building. The company has already purchased a large number of computers and office equipment, and their finances do not currently allow for extravagant expenses. We had to design the network in such a way that the costs are kept to a minimum, and satisfies all of the requirements that the company has put in place. In particular, they wanted the network to be capable of supporting all of the computer equipment they purchased as part of the expansion, as well as the equipment that they are moving from the old office building. We used MySQL Workbench to do the project

Achievements & Awards

- Best achiever in Physical Science Grade 11 Certificate
- Top 10 finalist Grade 11 Certificate
- Best Achiever in Physical Science Grade 10

Activities

- Enrolled at WeThinkCode Programme BootCamp
